

Exploring the epidemiology and transmission dynamics of Rift Valley Fever in the Horn of Africa

Sandpit Fellow: Ruth Omani

Mentors: Eric Fevre, Mark Nanyingi, Lisa Cavalerie, Matthew Baylis

Objectives:

1. To compare and contrast the possible routes of exposure of the 2018 RVF human cases in Wajir alongside controls, with a special focus on milk as a risk factor, by evaluating the different interactions with livestock that could be a source of RVF transmission
2. To evaluate milk handling and consumption habits before, during and after RVF outbreak.
3. To evaluate herd disease status and exposures to RVF with respect to the 2018 outbreak.
