

# COMPLETE SCALING READINESS STUDY

of the pig market arrangement framework in Uganda

Sartas et al. 2021 <https://cgspace.cgiar.org/handle/10568/115273>

## Challenge

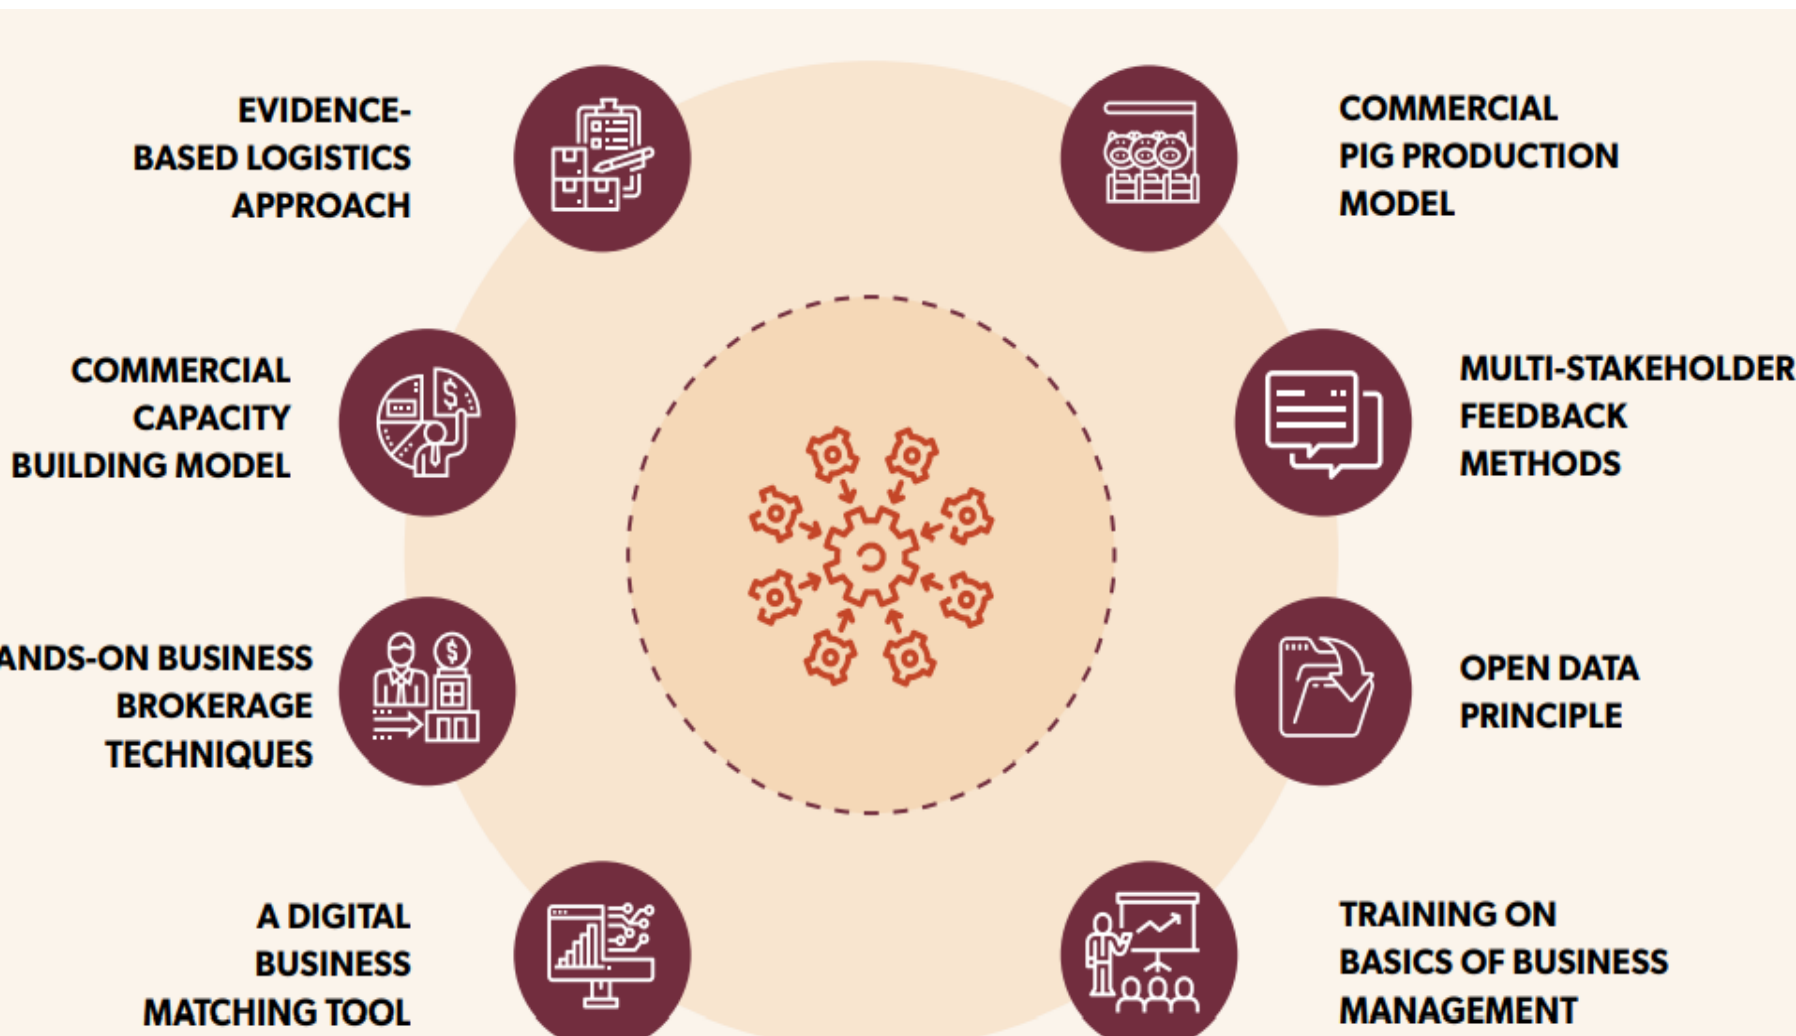

- Lack of evidence on the effective bottlenecks that hinder the development of Ugandan pig markets
- Lack of shared understanding among the key stakeholders of the pig market value chain on which immediate actions have the highest likelihood of improving the performance of pig markets

## Our approach

- A deep dive innovation and scaling study on the pig market arrangements as an innovative framework for advancing pig markets in Uganda
- Initial drafting of the study scanning 300+ evidence sources, reviewing 133 directly and using 66 in measurement of Innovation Readiness and Use levels of the framework, its components and its innovation package

## Results, outcomes, achievements

- The market arrangement framework has eight novel components and necessitates seven other innovations to achieve high impact at scale in Uganda
- Most components of the framework have Innovation Readiness Levels of 5 (proven application models)
- The Innovation Use Levels of components of the framework differs significantly

Eight novel components of the pig market arrangement framework in Uganda

# Deep Dive Scaling Readiness Study of Pig Market Framework in Uganda

*Project intervention*

*Deep dive scaling assessment*

## Lessons and significance

- One of the major bottlenecks for the market arrangement framework is generating, sharing, utilizing and sustaining open access market information on different levels of pig market value chain
- Contrary to the belief that business mindset is weak in Ugandan pig producers, the producers has a strong but different market logic. They utilize pigs as high return medium-term assets to address relatively big investments such as school fees, health expenses and marriages. This indicates a gap in current market approaches to pig sector in Uganda
- The framework need both research and development and utilization investments to achieve impact at scale

## Partners

- International Livestock Research Institute
- Ultimate Business Strategies (Uganda)
- Masaka District Local Government
- Wakiso District Local Government
- Mukono District Local Government
- Pig aggregators
- Pig Farmers
- Livestock input and service providers
